

UPDATING THE FIRMWARE ON MINILAB

Updating your MiniLab firmware is a simple process that only takes a couple of minutes.

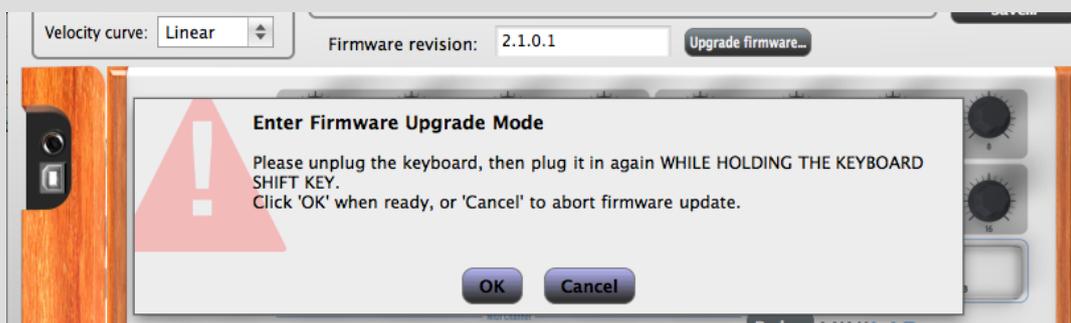

1. Go to <http://www.arturia.com/evolution/en/products/MiniLab/resources.html>
2. Scroll to the section labeled 'MIDI Control Center Update'
3. Download the latest MIDI Control Center software version
 - a. Choose the Mac or PC version based on your setup
4. Download the latest MiniLab Firmware file and save it to your hard drive to retrieve it later.
5. Connect your MiniLab to your computer via the USB connection.
6. Make sure that no other applications that use the USB MIDI ports are running.
7. Start the MIDI Control Center software. It will take about 5-6 seconds and it will find your MiniLab and display the current firmware version.

8. Click on the "Upgrade Firmware button".

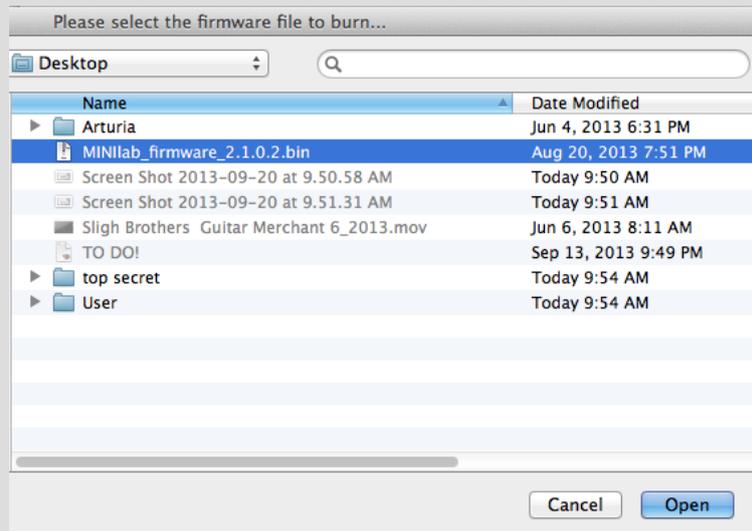

Upgrade firmware...

9. It will prompt you to disconnect your MiniLab's USB cable and then reconnect it while holding down the SHIFT button.

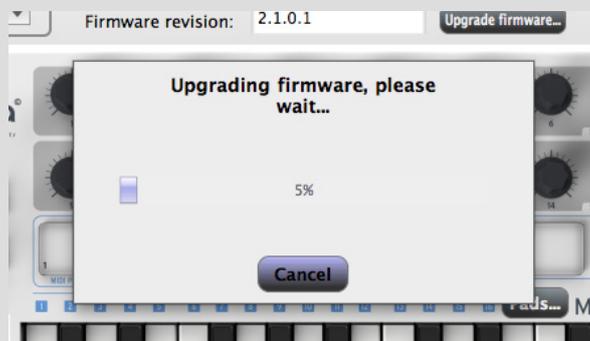

10. Click the OK button once you connected your MiniLab again.

11. Once you click the OK button, it will ask you to find the firmware file you downloaded.

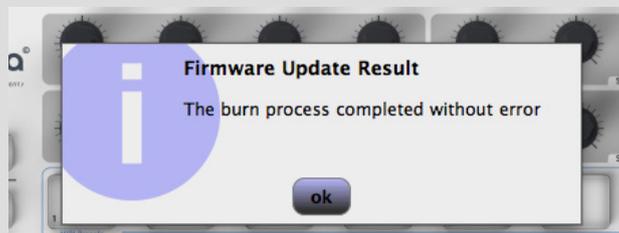

12. Once you choose the file and press OPEN, it will be the update process.

DO NOT DISCONNECT YOUR MINILAB DURING THIS PROCESS!!!!

13. Once it is finished, it should show you that the process has completed.

14. Now shut down the MIDI Control Center Software.

15. Disconnect and reconnect your MiniLab.

16. You are now ready to go.
